

# Unprecedented times call for Unprecedented individuals.

Our world has changed dramatically in a few short years.  
In these unprecedented times, conventional wisdom and standard ways of thinking  
no longer apply. These times call for individuals who can offer solutions with  
completely new values unbound by precedent.

Humanics is an innovative field consisting of biomedical sciences combined with  
physical sciences, engineering, and informatics. It guides students to master both  
disciplines for their own research, breaking down and  
overcoming existing barriers.

This will lead to ideas like none ever seen along with science and technology  
breakthroughs that were thought to be impossible.  
The more unknown the terrain, the greater its potential to move the world.

Currently, we are preparing for the establishment of the **Graduate School of Integrative and Global Multidisciplinary Arena (G-SIGMA)**, **Doctoral Program in Humanics (HXP)**, scheduled for April 2027. If the application for establishment is approved, successful applicants in the August 2026 entrance examination will enroll in the HXP. For details about the new program, please check the G-SIGMA website.  
If the establishment application for HXP is approved, the January–February 2027 entrance examination will have changes in its schedule and test content, so please check the latest admissions information on the G-SIGMA website. If establishment is approved, a new set of application guidelines is planned to be released around September 2026.
